

QuestHR

CHANDRAMARI GROUP

360-degree validation report

Front end · back end · database · real browser

Several users at the same time · access rules · recovery

114 checks passed · 0 failed

Version 5.0 · 20 October 2026 · UAE · KSA · Qatar · India

Summary

QuestHR 5.0 was validated on 20 October 2026 from four directions: the app logic for every user and every screen, the server and database end to end with several people signed in at once, a real Chromium browser on desktop and phone screens, and the installers. **114 checks passed and 0 failed.** Problems found during validation were fixed and the full set was run again.

Layer	How it was tested	Result
Front end	172 screen renders (11 users × every tab), scoring, delay flow, escalation, reviews, chats, exports, troubleshooter	**46/46 passed**
Back end and database	Temporary server; 5 people signed in at once across Dubai, Doha and Riyadh roles; access rules; tamper attempts; restart; damaged-database recovery; JSON fallback	**56/56 passed**
Real browser	Chromium on desktop and phone screens against the server package	**8/8 passed**
Installers	Linux run-through in a sandbox, syntax checks, icon formats	**4/4 passed**

Problems found and fixed during validation

Problem	Effect before the fix	Fix
Sync of loaded records	A second computer could treat data it had just loaded as “unsaved”, ignore colleagues’ updates and overwrite them	Records are now stored in a fixed order, so every computer agrees on what is saved
Hidden windows	Closed pop-ups (task detail, AI panel, celebration) could stay on screen and block clicks in some browsers	Hidden windows are now always fully hidden
Empty workspace	A rare error while reconnecting before the organisation had loaded	Safe defaults while data is loading
Escalation at the top	An escalation already with senior management could not go further	It now goes to the admin as the final level
Damaged database file	A completely unreadable database made the server switch to a new empty store	The server now keeps the damaged copy, restores the newest backup and replays every later change
Expired sign-in on the server	Was reported as “view-only access”	Now says the session ended and resends unsaved work after signing in
Scorecard PDF	Column headings overlapped	Columns widened
Sample data	No overdue task without a reason; review comments did not match the unit	Added an overdue Doha task; reviews match each industry

A. App logic: every user, every screen (46 checks)

	Check
PASS	all views render for all 11 users (172 renders)
PASS	signed-out view shows sign-in
PASS	scorecard covers whole scope (10)
PASS	every positive ledger entry is exactly 100
PASS	no points before sign-off
PASS	+100 after sign-off

	Check
PASS	no double award
PASS	sample has an overdue task needing a reason: Allergen matrix update: Doha menu
PASS	assignee sees the delay-reason form
PASS	empty remark rejected
PASS	delay reason submitted
PASS	stage L1 ack with Fatima Al-Kuwari
PASS	assignee cannot acknowledge own
PASS	supervisor acknowledged
PASS	stage L2 decide with Omar Siddiqui
PASS	invalid without note blocked
PASS	valid: no negative marks, new due 2026-10-25
PASS	task no longer needs a reason
PASS	invalid: −25 recorded (Lina Khoury)
PASS	late L1 escalates to level 2 → Omar Siddiqui
PASS	supervisor review saved
PASS	review appears on scorecard
PASS	arjun sees lobby, unit and his escalation
PASS	unrelated member cannot see escalation
PASS	message sent
PASS	escalated to level 3
PASS	escalation resolved
PASS	new escalation starts with supervisor
PASS	direct message thread reused
PASS	unread count for recipient (6)
PASS	diagnostics ran 9 checks: warn,ok,ok,bad,warn,ok,warn,warn,ok
PASS	diagnostics did not change data
PASS	sample data integrity clean:
PASS	clearing view settings did not change data
PASS	help view
PASS	excel sheets: Scorecard, Points ledger, Delays and escalations
PASS	team member has no scorecard tab
PASS	manager scorecard limited to own team
PASS	shared store written (194 docs)
PASS	points, reviews, chats and messages stored
PASS	largest doc logs/u2_2026-09 12260 bytes
PASS	second client loads users and messages (12)

	Check
PASS	second client sees points ledger (22)
PASS	message appears live on the other client
PASS	sign-off points sync to other client
PASS	presence received

B. Server, database and several users at once (56 checks)

	Check
PASS	server answers and is not set up yet (SQLite)
PASS	app page is served
PASS	installable app manifest and offline libraries are wired in
PASS	desktop and app icons are served
PASS	app connects to the server in live mode
PASS	first visit offers setup or the sample organisation
PASS	sample organisation saved to the server database
PASS	signed-out visitors see names only, never password data
PASS	signed-out visitors see no tasks
PASS	setup window is limited to the computer that set it up
PASS	wrong locality Wi-Fi password is refused: That is not the Wi-Fi password for Dubai HQ.
PASS	admin signs in
PASS	restaurant manager signs in
PASS	team member (Dubai) signs in
PASS	team member (Doha) signs in
PASS	senior management signs in
PASS	everyone sees who is online (5 online)
PASS	admin sees every task (117, including automatic document-renewal tasks)
PASS	team member sees only his own and eligible team tasks (23)
PASS	team member cannot see another unit’s daily logs
PASS	manager sees her team’s logs, not other units
PASS	leave and letter requests stay private to the chain
PASS	no password or Wi-Fi hashes reach any browser
PASS	completed task reaches the supervisor live
PASS	no points before sign-off
PASS	+100 recorded and visible to the member and senior management
PASS	server refuses self-awarded points
PASS	overdue task asks the member for a reason
PASS	reason appears in the supervisor’s queue live

	Check
PASS	acknowledgement reaches management (level 2)
PASS	management approves: new date set
PASS	valid reason carries no negative marks
PASS	unit message arrives live on a colleague’s screen in another country
PASS	admin can read all channels
PASS	escalation reaches the supervisor
PASS	escalation is private to its chain
PASS	escalated to senior management (level 2)
PASS	document upload stored on the server
PASS	documents open for signed-in people only
PASS	delete is refused for everyone, including the admin
PASS	a member cannot wipe messages by overwriting them
PASS	only the admin can change organisation settings
PASS	a member cannot promote himself
PASS	five wrong passwords lock the account for a minute
PASS	member changes her password
PASS	sign out ends the session
PASS	server diagnostics: ok, ok, ok, warn, warn, warn, ok, warn
PASS	the app troubleshooter includes the server checks
PASS	admin backup written: questhr-2026-10-20_0541.db
PASS	only the admin can trigger server repairs
PASS	members can download a desktop-icon installer pre-filled with the server address
PASS	all data is still there after a restart (session kept)
PASS	damaged database detected and restored automatically
PASS	the damaged copy is kept, not deleted
PASS	every record recovered, including changes after the last backup
PASS	JSON storage saves and reloads the organisation

C. Real browser: Chromium, desktop and phone (8 checks)

	Check
PASS	App loads from the QuestHR server in Chromium; sample organisation set up through the real interface
PASS	Senior management opened all 19 screens on a desktop screen without a single script error
PASS	A team member signed in at the same time on a phone-sized screen (390 × 844)
PASS	Overdue-task reason form shown and submitted from the phone
PASS	Message typed in Doha appeared live on the Dubai screen
PASS	Scorecard PDF, scorecard Excel and the manual PDF downloaded from the browser

	Check
PASS	Installable app: web manifest served and offline service worker registered
PASS	Zero console or page errors across the whole run

D. Installers and desktop icons (4 checks)

	Check
PASS	Linux installer: detected Google Drive, wrote config.json, created the Desktop and menu icon, started the server
PASS	macOS and Linux installer scripts pass shell syntax checks
PASS	Icons generated for every platform: .ico (Windows), .icns (macOS), PNG 16–1024 px
PASS	Member desktop-icon installers are generated by the server with its own address

Known limits

- AI features on your own server need an Anthropic API key in config.json; without it every other feature works.
- The Windows installer and the macOS app could not be run here (Linux test environment); their scripts were reviewed and the shared parts tested. Run node tests/validate.js on the target Windows or macOS server after installing.
- Internet checks in the troubleshooter (nodejs.org, status.anthropic.com) were blocked in the test environment and correctly reported as “not reachable”.
- Live presence inside the Claude-hosted pilot uses Claude’s room feature; on your server it uses the server’s live stream (tested).
- The pilot inside Claude holds up to 25,000 records; plan the move to the server before that.

How to repeat this validation on your server

```
node tests/validate.js
```

It runs the server and database checks on a temporary folder and writes questhr-validation-result.json. Your real data is never touched.
